## Does your wellness program have all of the pieces to the puzzle? “The Value of Claims Data Integration”.

Our proprietary healthcare analytics platform allows us to incorporate each individual's medical and pharmacy data from their medical plan into their personal employee portal (Personal Health Manager). Providing employee's one robust platform to engage and manage their health.

The benefits of this integrated platform for Employer's and Brokers/Consultants alike is the ability to understand what is driving the cost and the prevalence of those conditions. By integrating actual medical and pharmacy claims data, self-reported conditions and measurable biometric and lab results we are able to measure, manage and take action to drill down health claims costs. When this information is applied to our data analytics and coupled with our medical management programs we are able to provide both clinical and financial return on investment (ROI).

### Services Included:

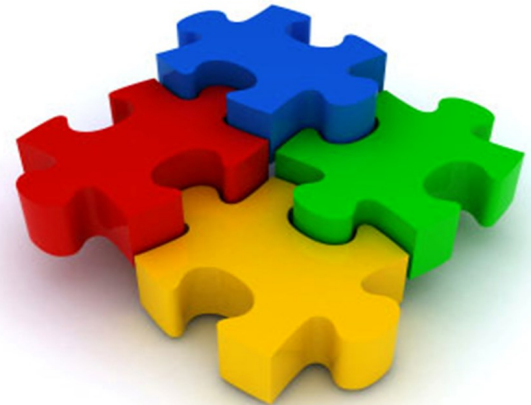

- Claims Data Analytics
- Drill Down Technology
- Predictive Modeling
- Plan Modeling
- Compliance Trends

If your wellness program isn't connecting all of the pieces of the puzzle, contact

*Our next edition will cover the last puzzle piece, Clinical Services/Health Coaching/Disease Management.*
